This method offers several advantages over the prior art. It allows the client to receive help from an advisor without leaving the web page on which a problem occurred. It enables a client to send information helping the selection of a solution or selection of an advisor able to determine a solution. It enables the advisor to see customer information and web context information that may assist an advisor in finding a solution. It provides the advisor a synchronized display with the client, so that the client can clearly demonstrate the problem to the advisor.
